

-  Hedge retained
 Vegetation removed
 Tree protection BS5837:2012

Hedge line to be managed. Bramble and Ivy to be removed. Depending on quality of that remaining either gap up with new hawthorn and hazel to infill or remove and plant new hedge. To ensure a hedge is retained along the road edge for the future.

Road side hedge line H1

Unmanaged former hedge line, over run with Ivy, liable to collapse. Self set ash which will need topping due to overhead lines, or proximity to street light. Elder.

It is considered that if ivy is removed as part of management there would be only 25% maximum vegetation remaining

longstanton road.

Existing
Close board fence

No1
Mustills
Lane

Internal vegetation

2 small poor quality apple trees less than 2m high

Brambles with the occasional self et young ash and thorn.

Remove all.

S2 Boundary laurels

Predominately laurels with occasional former native hedgerow material – field maple with thin over hang. Much of the vegetation is off site and just overhanging site

Cut back to boundary

S1 Boundary scrub

Off site elm ivy bramble and elder with some ash self sets to be cut back to boundary

One ash stool to be removed from previously felled tree
